Sequence 61, Application US/08645641

Patent No. 5719032.

GENERAL INCRRATION:

APPLICANT: Lonberg, Nils

APPLICANT: Kay, Robert M.

ITILE OF INVENITON: Producing Heterologous Antibodies

NUMBER OF SEQUENCES: 150

CORRESPONDENCE ADDRESS:

ADDRESSEE: William M. Smith

STREET: Two Embarcadero Center, 8th Floor

CITY: San Francisco

CITY: San Francisco

CITY: San Francisco

COUNTRY: USA

STATE: California

COUNTRY: USA

COMPUTER READABLE FORM:

MEDIUM TYPE: Ploppy disk

COMPUTER: IBM C Compatible

OPERATION SYSTEM: PC-DOS/MS-DOS

OSPTWARE: PatentIn Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/645,641

FILING DATE: 20-MAY-1996

CLASSIFICATION DATA:

APPLICATION NUMBER: US 07/904,068

FILING DATE: 23-UMY-1995

FILING DATE: 23-UMY-1995

FILING DATE: 23-UMY-1995

FILING DATE: 23-UMY-1995

FILING DATE: 23-UMY-1995

FILING DATE: 23-UMY-1995

Patent No. 5814318
GENERAL INFORMATION:
APPLICANT: Lonberg, Nils
APPLICANT: Kay, Robert M
TITLE OF INVENTION: Transgenic No. 5814318-Human Animals for TITLE OF INVENTION: Producing Heterologous Antibodies
NUMBER OF SEQUENCES: 210
CORRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend Khourie and Crew
STREET: One Market Plaza, Steuart Tower, Suite 200
                                                                          Length 813;
                                                                                                                                                                                                                    1 AGGTGCAGCTGCTGCAGTCTGGGGCTGAGGAGAAGCCTGGGTCCT
                                                                                                                                                 Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ZIP: 94105

Site_2: BcoRI; cDNA made by oligo-dT priming)
Site_2: BcoRI; cDNA made by oligo-dT priming.
Directionally cloned into EcoRI/XhoI sites using the
following 5' adaptor: GGCACGAG(G). Size-selected >500bp
for average insert size I.8kb. Library constructed by Ling
Hong in the laboratory of Gerald M. Rubin (University of
California, Berkeley) using ZAP-cDNA synthesis kit
(Stratagene) and Superscript II RT (Life Technologies).
Note: this is a NIH—MGC Library."

                                                                                                                                                                                                                                                                                                                       This invention describes a human antibody (hAb) against a fusion (poly)peptide or protein that includes a segment of at least 6 consecutive His residues. This antibody is useful in Western blots, enzyme-linked immunosorbent assay (ELISA), immunofluorescence or immunoprecipitation assays. Also hAb can be used for affinity purification of the protein, for in vivo diagnosis or therapy, and in production of vaccines. hAb are universally applicable alternatives to human serum. They are specific for the polyhistidine tag, regardless of the nature of the rest of the protein. Since hAb are not produced in an animal, they contain no components that can induce an immune response in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          71.1%; Score 254.6; DB 20; Length 814;
